

Securing our Energy Future: From Farm to Fuel

Friday, September 8, 2006

**11:00AM- Washington
Convention Center
Room 209 C**

- Dr. Georges Benjamin, American Public Health Association
- H. Heath Hill, Independent Farmer
- Larry Mitchell, American Corn Growers Association
- Dr. Napoleon Moses, Alcorn State University
- Dr. G. Todd Wright, Savannah River Lab

It is time for America to energize itself and our energy can be American grown. We can reduce our reliance on foreign fuel needed to drive our economy and maintain our quality of life. We can achieve this goal with alternative fuel options, including biofuels from plant materials grown by the American farmer. These fuels will allow us to invest our energy dollars at home. They can also make us healthier by reducing global warming and improving air quality. For our health, our economy and our security, its time for America, not the middle east, to supply our energy.
